PROFESSIONAL SUMMARY

Undergraduate student majoring in Computer Science at BINUS University (Semester 5) with a strong interest in Data Analytics. Proficient in utilizing tools such as Python, SQL, Tableau, PowerBI, Microsoft Excel through hands-on academic and personal projects. Possess strong analytical, problem-solving, and adaptability skills, eager to leverage academic knowledge into a full-time internship program.

EDUCATION

Bina Nusantara University (BINUS University) — Kemanggisian

Bachelor of Computer Science | 09, 2024 – Present (Expected Graduation: 2028)

- GPA: 3.48
- Relevant Coursework: Data Mining, Data Analytics, Data Visualization, Data Engineering, Big Data Processing

PROJECTS

Unsupervised Retail Transaction & Return Behavioral Analytics using K-Means **| [Link Project](#) | Python (Pandas, Scikit-Learn, Seaborn)**

- Engineered an end-to-end customer segmentation pipeline by building RFM (Recency, Frequency, Monetary) metrics and implementing K-Means clustering on retail transaction data which consists over 500k row data.
- Identified 4 distinct customer behavioral cohorts (Champions, Loyal, At-Risk, Lost), delivering targeted marketing recommendations that optimize customer retention strategies and minimize churn risk.

[Interactive Sales Performance Dashboard](#) | [Link Project](#) | Tools: Tableau

- Designed an interactive Tableau dashboard to analyze retail sales trends, regional distribution, and product category profit margins.
- Uncovered critical regional sales bottlenecks and high-yielding product opportunities, enabling stakeholders to optimize inventory distribution and streamline strategic planning.

Loan Approval Analysis Dashboard | [Link Project](#) | Tools: Power BI, Power Query, DAX

- Executed end-to-end data preprocessing and ETL using Power Query to clean, transform, and structure raw loan applicant data into an optimized data model.
- Constructed an interactive BI dashboard with custom DAX risk metrics, identifying key NPL and DTI default drivers to accelerate loan approval turnaround times.

ETL Data Pipeline & Deep Work Disruption Analysis | [Link Project](#) | Tools: Pentaho Spoon, MySQL, Python (Scikit-Learn)

- Built an end-to-end ETL pipeline using Pentaho Spoon to extract, clean, and structure raw screen-time logs, platform metrics, and feature-level usage data which consists 5000 row data.
- Comparing a Random Forest and XGBoost model in Python and analyzed feature importance to pinpoint the specific social media platforms and features most disruptive to deep-work productivity.

Air Quality Monitoring Big Data Processing | [Link Project](#) | Tools: PySpark, Spark MLlib, Python, Matplotlib

- Architected a distributed PySpark batch processing pipeline on Google Colab to clean and transform OPENAQ PM2.5 big data.
- Deployed a Spark MLlib Random Forest classifier achieving 87% predictive accuracy, uncovering peak rush-hour pollution spikes (3–5 PM) to recommend municipal low-emission zones.

ADDITIONAL INFORMATION

- Languages: Indonesian (Native), English (Intermediate)
- Soft Skill: Problem Solving, Time Management, Critical Thinking, Adaptability, Teamwork
- Programming & Databases: Python,C, MySQL
- Data Analysis & Machine Learning: Exploratory Data Analysis (EDA), Feature Engineering, Regression Analysis, Clustering & Segmentation, Predictive Modeling
- Business Intelligence & Visualization: Power BI, Tableau, Power Query, DAX, Microsoft Excel
- Data Engineering & Big Data: Pentaho Spoon (ETL), PySpark, SparkMLib, Big Data Processing
- Tools & Platforms: Git, GitHub, Jupyter Notebook
